mijin Catapult (v.2) Enterprise Product Version Passes AWS Foundational Technical Review (FTR)

TOKYO – January 23, 2023 –

Today Tech Bureau, Corp., a fintech and cryptocurrency solutions company, is pleased to announce that mijin Catapult (v.2) Enterprise Product Version has passed the AWS Foundational Technical Review (FTR) of Amazon Web Services (hereinafter referred to as "AWS") and has been certified as an AWS Certified Badge.

Passing the FTR validates the effort and expertise we have put into developing the mijin Catapult (v.2) Enterprise Product Version and confirms that it is stable and works on AWS.
By providing solutions that meet AWS technical certification standards, our customers can use blockchain on AWS with greater confidence and security.
We will continue to innovate to meet the needs of our customers.

We will continue to provide satisfactory services to our customers through mijin Catapult (v.2) Enterprise Version.

mijin Catapult (v.2) Enterprise Product Version

Deployment Guides： https://aws.mijin.io/deployment/en/index.html

Overview

・Nodes: 5-9（API node x2, PEER node x3-x7）
・Deployment: the following configuration is completed in about 30 minutes
・License fee: one Node $0.40 / hour
・Infrastructure costs: AWS usage fees, Amazon EC2, Amazon EBS, Elastic Load Balancing, Amazon Route 53, Amazon VPC(Nat Gateway), and parameter store costs incurred
・AWS Regions: 21 regions worldwide
・Customizability:

- ★ install on an existing VPC or a new VPC
- ★ whether to use a load balancer or not
- ★ the API node deployment network
- ★ node specs and number of nodes
- ★ block generation time
- ★ with or without transaction fee and rental fees
- ★ the maximum number of signatures an account can have
- ★ the type of finalization
- ★ the maximum number of transactions per block
- ★ the maximum number of API Rest connections
- ★ the size that can store unapproved transactions

■About mijin

"mijin" is a software to create private blockchain environments that can be used inside and/or outside of corporations on the cloud and/or in an in-house data center. It can dramatically reduce costs by replacing conventional databases or accounting systems while contributing to higher security by preventing falsification. Additionally, it can be used to implement an environment with practically zero downtime. "mijin" is a general-purpose private blockchain product which uses the "NEM/Symbol protocol" that is developed together with a "NEM/Symbol" core developer. As a joint
development, not only limiting to financial institutions, but it can be also implemented for electronic money, verification system, registration system, and logistics tracking
